

Himel Variable Speed Drives

SMART Pump

About Himel

Himel is a multinational manufacturer and provider of electrical products successfully combining global expertise with local knowledge.

Founded by a Spanish entrepreneur in 1958, the company pioneered in exporting quality electrical enclosures, establishing Himel brand globally. Today, our global footprint and technology enable us to provide the best combination of affordable and reliable offers for Low Voltage Power distribution, Industry Automation and Home Electric to our long-term customers and partners in over 50 countries where we are present.

Himel. Reliable made affordable

SMART Pump (**SP**)

SMART Pump (SP) drives are full-featured dedicated drives for parabolic load applications like pumps, fans, and chillers. SP drives have a wide range of integrated features like multi-pump control, dry run protection, sensor-less flow and energy calculation, pump cleaning, fire override mode, frost, condensation and hammer effect protections to meet the needs of pump, fans and chillers for modern buildings.

*4T: 380V 3 phase **2T: 220V 3 phase

Improved Energy Savings

With many integrated control modes like ECO-mode, $V^2/F\!\!,$ and PID with sleep mode.

High Robustness

- Stable operation in difficult environments
- Built-in category C3 EMC filter (≥ 11kW)

Special program functions

- Multi-pump control
- Energy meter
- Flow calculation
- Pump cleaning
- Fire Override mode
- Dual Ramp

Pump-specific protections

- Dry run detection
- Frost and condensation protection
- Hammer effect protection
- Undervoltage, overvoltage, overcurrent, overload protection
- Phase-loss protection
- Short-circuit protection

PC Tool-Himel studio

- Parameters setting and copy
- Monitoring drive status
- Monitoring IO terminal status and test
- Drive debugging and trial run
- Fault record and measurement
- Firmware upgrade

Support most communication protocols for the pump and fan

- One drive support most popular 3 protocols in the pump and fan applications
- Build in Modus RTU/RS485 port
- Build in ModusTCP/RJ45 port
- Provide BACnet MS/TP extension card

Reliable made affordable

	Your benefits
V ² /f lagnetic flux to a sleep mode	 Energy savings during low dynamic load cycles such as pump and Fan Increase the potential savings by up to 70% Greatly reduces the return time of investment
mp application	
it voltage ith net ′ (-15%/+10 %) ′3 standard	 Wider voltage range, increases robustness of the drive in difficult environment Automatic adaptation in case of unstable power supply Better electromagnetic immunity against signal noises. Supports longer connection cables.
	 Control 3 pumps (with external I/O card) Measure energy and flow without an external sensor Clears the blockage in the pump Reduces the maintenance requirements Keeps the critical fans and pumps running in case of fire in a building Separate initial and final ramp ratio optimizes the motor start and stop
n d protection	 Protects the impeller and rear housing against dry run. Protects the pump against moisture and water freezing inside pump. Controls the water flow when pipe is empty hence eliminating the hammer effect at the starting phase. Long lifecycle running in high humidity and high dust occasions Easy to maintain
d test	◆ Easy to commission
o and fan	
B protocols in t n card	 Easy system configuration with PLC,HMI and upper controller. Full flexibility to configure the baud rate, parity / stop bit and address by parameterization. Suitable for HVAC application

SPECIAL FEATURES AND BENEFITS

PID with Sleep mode

- Frequent start/stop of the pump wastes energy and causes wear and tear in the pump.
- PID with sleep mode switches the pump to sleep mode if the pressure increases by a fixed value above the set point.
- It will wake up the pump if the pressure inside the pipe falls below the lowest required pressure set by the user.
- PID with sleep mode helps save more energy and enhances pump life

Multi-pump Control (Fixed)

- Control up to 3 pumps with I/O card for start, stop and switchover by integrated PID controller.
- FixedType: Motor connected to the drive's output is fixed. VSD increases/decreases the number of motors run by the power grid depending on PID feedback.
- FloatingType: Motor connected to the drive is not fixed. Drive switches to the next motor and hands over the previous pump to the power grid.
- Smooth start and stop of each pump to ensure best performance
- Reduces the total cost of ownership

Energy and flow calculator

- Data will be more and more important for the energy audit to continuously improve the system performance.
- The water volume or flow data will indicate the real-time status. With the Energy and Flow meter, SMART Pump will estimate the energy consumption to explain the status of running pump or fan system to optimize the system

- In the sewage water processing, the blockage in the pump will reduce the efficiency of the system and make the starting phase very difficult.
- With pump-cleaning function, the blockage can be swept automatically before the normal operation.
- ♦ It reduces the maintenance requirements

Fire Override mode

- The control system or wiring may be damaged in the fire disaster situation, which may disconnect the setpoint or run command of the critical fans in the stair well, tunnel, subway such important space.
- Fire override mode will keep the fans working without controller in critical situations and help maintain the air-supply and keep fireproof door closed.
- It keeps fans working to give the pressure in the stair well to force the fireproof door close to reduce the spread of fire and smoke

Dual Ramp

- Separate initial and final ramp ratio optimizes the motor start and stop. During start phase, pumps (esp. submersible pumps) are more prone
- to wear and tear if the ramp up is slow. A quick ramp up at start phase protects the pump from wear and tear.
- Slow ramp up after the initial phase improves the control accuracy.

Pump-cleaning function

Special Pump Protections

- The drive can track the load and protect against
- Dry pump run.
- Leakage or pipe breakage
- Blockage in the pipe.
- Protect the pump against abnormal loads.
- Protect impeller and rear housing against dry run.
- Extends pumps life.

Frost and Condensation Protection

- Water frozen inside pump damages the pump. Frost protection keeps the motor slowly moving to avoid water freezing inside pump.
- In humid and cold environments, condensation can cause motor failure. Condensation protection keeps motor warm to get rid of moisture.

Hammer Effect protection

- In pumping applications, during start phase high speed inrush water can hit the pump very hard which is know as "hammer effect".
- Smart Pump drive can fill the pipe smoothly at the start phase to avoid pump damage.

Target Applications

Irrigation

Sand pump

Sewage

Circulating pump

Fountain

Rod pump

Drying

Dust removal

Hot surface treatment

Air supply fan for boiler

Industrial fan
